

How to Build A Hockey Snowman

By Owen L

Materials

Hockey stick

Snow

Your head size Hockey helmet

Hockey gloves

3 chunks of coal

Chest pad and sticks

Instructions

~ **First** Make a snowball about as thick as your upper

body and as tall as your lower half of your body. ~ **Next** Make

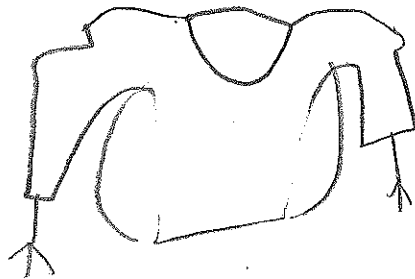

another snowball make it about a foot smaller and a half a

foot thinner than the first snow ball you made. ~ **Then** Make a third

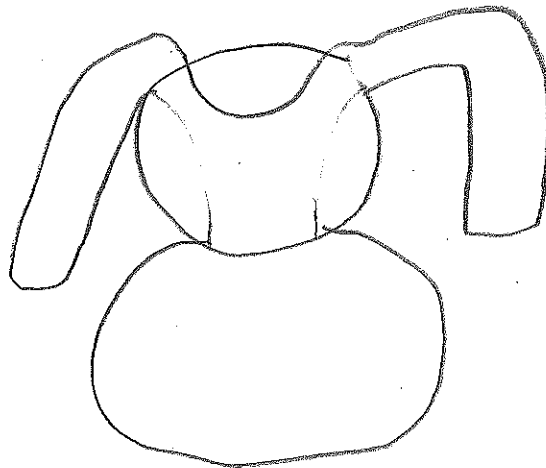

snowball about the size of your head. ~ **Now** Put 1 stick on both sides of the

middle sized snowball. Make sure they look like you can fold it in half and it

still the same on both sides now put the chest pads on it should look like this.

Now put that snowball with the chest pads on the biggest snowball that will look like this.

~ **Then** Put the last snowball above the middle sized snowball.

Now put two pieces of coal about where your eyes are make them about 3 inches apart from each other. Then about 4 inches below put one piece of coal. Now put the helmet on over the smallest snowball then remember those to sticks put the hockey gloves on the sticks make sure the gloves are facing away from the snowman.

It will probably look like the sketch above. **Helpful Tips:** Do not put near street, Sledding hill or anything that will make the snowman melt. **You can add** A jersey a hockey puck and elbow pads.
