

Thursday, March 19, 2020 Kindergarten Science Activity

Overview: You will watch a video and create a skeleton of your own

Estimated time: 20 minutes

Explanation: You will watch a video on the bones in your body and create your very own skeleton craft

Things to Know:

1. Sit with an adult, mom or dad or an older sibling to discuss the Brain Pop Jr video after you watch it.
2. Have a parent access Brain Pop Jr that I provide on my assignment page.
3. You will need some materials (Q-tips, glue (and or tape), crayons (or markers), a piece of paper. It is ok if you don't have any of those materials at home. You can draw on an ipad drawing app, you can draw on a blank back page of one of your Distance Learning pages or whatever will work for you. If you have different materials at home and mom/dad say it is okay, you can use whatever materials you would like to.

Tasks:

1. Watch Brain Pop Jr video on bones- can access link on activity lesson page.
2. Talk with another family members about the video. Can you name 3 bones in your body?
3. Gather all the materials that you have from above. Use the picture on my assignment page as a guideline. Create, using Q-tips or draw, an outline of a skeleton. Have fun creating!
4. With mom/dad's permission and if you would like to, send Mrs. Parks a picture of your skeleton creation via email.

How is this assignment turned in to the teacher: If you would like to, you can take a picture of your "skeleton" and email it to me. You can put the picture in your DL envelope to bring back to school. Remember to have fun!
