

Calculating Slope

Find the slope of the line by graphing ($\frac{\text{rise}}{\text{run}}$) & by using the Slope Formula. Hint: you should get the same value.

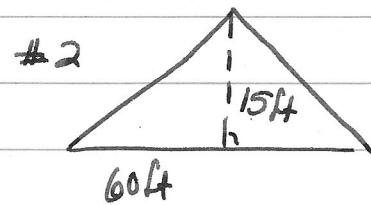

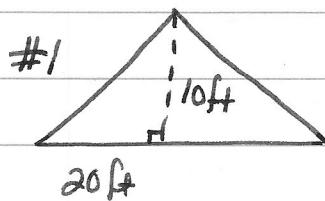

$$\textcircled{1} \ (-6, 1) \ \& \ (-3, -2) \quad \textcircled{2} \ (5, -2) \ \& \ (-5, 6)$$

$$\textcircled{3} \ (\frac{1}{2}, 3) \ \& \ (1, 6) \quad \textcircled{4} \ (-2, -4) \ \& \ (3, -4)$$

\textcircled{5}

x	-3	0	3
y	2	1	0

Two houses have the following roof designs:

Which roof is steeper?

Answers:

$$\textcircled{1} \ m = -1 \quad \textcircled{2} \ m = -\frac{4}{5} \quad \textcircled{3} \ m = 6$$

$$\textcircled{4} \ m = 0 \quad \textcircled{5} \ m = -\frac{1}{3}$$

House #1 has steeper slope, $\frac{1}{2} > \frac{1}{4}$
