

CHAPTER 6 SECTION 1 B

Solving 1-step Inequalities

Inequality symbols

- Used to compare 2 non-equal values

- Symbol

- $<$

- $>$

- \leq

- \geq

- Read as

- **“ is less than”**

- **“ is greater than”**

- **“ is less than or equal to”**

- **“ is greater than or equal to”**

Solving Inequalities

- The solutions to an inequality is a range of numbers (is not just a single number)
- Steps for solving:
 - Perform opposite ~~operation~~ **operation** to solve for the variable
 - Draw a number line and label the key points
 - Mark the appropriate dot (open or closed)
 - Shade in the correct region

Examples:

□ 1. $x + 5 > 3$
 $\quad \quad \quad \cancel{-5} \quad -5$
 $\quad \quad \quad x > -2$

□ 2. $x - 2 < 4$
 $\quad \quad \quad \cancel{+2} \quad +2$
 $\quad \quad \quad x < 6$

Examples:

□ 3. $x - 1 \leq 8$
 $+1 \quad +1$
 $x \leq 9$

□ 4. $x - 3 \geq -1$
 $+3 \quad +3$
 $x \geq 2$

Examples

□ 5. $x + 4 \leq 2$

$$-4 \quad -4$$

$$x \leq -2$$

□ 6. $x + 5 > 1$

$$-5 \quad -5$$

$$x > -4$$

On your own

□ 7. $x - 2 > -3$

$-2 \quad -2$
 $x > -5$

→

□ 9. $x - 3 < -2$

$+3 \quad +3$
 $x < 1$

□ 8. $x - 1 < 0$

$+1 \quad +1$
 $x < 1$

□ 10. $x + 2 > 9$

$-2 \quad -2$

$x > 7$
