

# General Rules for contour lines

A contour line connects points of equal elevation.

A contour line never branches or splits

Steep slopes are shown by closely spaced contour lines.

Contour lines never cross, but they may touch.

Hills are represented by a concentric series of closed contour lines.

Contour lines form a “V” pattern when crossing streams. The apex of the “V” always points upstream.

Contour interval (C.I.) is the vertical difference in elevation between adjacent contour lines.

$CI =$   
10 FT
