

3.11.20

Graphing: Proportions

Today's Objectives:

- Solve Proportion Problems
 - From an equation
 - From a data table
- Practice on a computer simulation

12 m

8 m

Area: 96 m²

If we double the length of the sides of this rectangle, what would be the new dimensions?

What would the area of the new rectangle be?

• Proportions (double, triple, halve)

1. Figure out "what's the multiplier?" $\text{double} = 2$
2. Plug the multiplier into the equation
3. Keep the other variables and numbers as 1

$$\text{\$} = (\text{Pay Rate})(\text{Hours Worked})$$

If your pay rate is doubled, your paycheck will 2.1 = $\times 2$

If your pay rate is quadrupled, your paycheck will $\times 4$

If your pay rate is halved, your paycheck will $\times \frac{1}{2}$

1. Figure out "what's the multiplier?"
2. Plug the multiplier into the equation
3. Keep the other variables as 1

$$\text{YourShare} = \frac{\text{TotalLotteryAmount}}{\text{\#ofwinners}}$$

If the lottery amount doubles, your share $\frac{2}{1} = \times 2$

If the \# of winners doubles, your share $\frac{1}{2} = \times 1/2$

$$y = x^2$$

If you...

■ double x, y will ...

$$2^2 = \times 4$$

■ triple x, y will ...

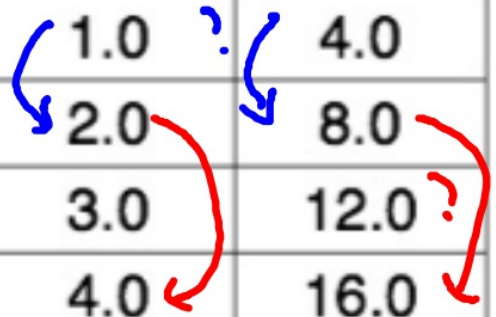

$$3^2 = \times 9$$

■ halve x, y will ...

$$\left(\frac{1}{2}\right)^2 = \times \frac{1}{4}$$

Proportions - From a Data Table

x	y
0.0	0.0
1.0	4.0
2.0	8.0
3.0	12.0
4.0	16.0

When you double X,
Y will.....

double!

x	y
0.0	0.0
1.0	1.0
2.0	4.0
3.0	9.0
4.0	16.0

When you double X,
Y will.....

X4
