

4.6.20

Graphing: PT Graphing 2

Today's Objectives:

- Learn all 7 PT graphs
- Solve 'racing' problems
- Use computer software to get slope and intercept

- The "zero meter position" is the Origin.
- Cruise Control is also known as Constant Velocity (C.V.)
- The slope of a P/T graph is its Velocity.

Uphill: +
Downhill: -

What are the 7 ways to move along a line?

1. Still
2. CV-Away
3. CV-Towards
4. Speed Up Away
5. Slow Down Away
6. Speed Up Towards
7. Slow Down Towards

"Racing" Questions

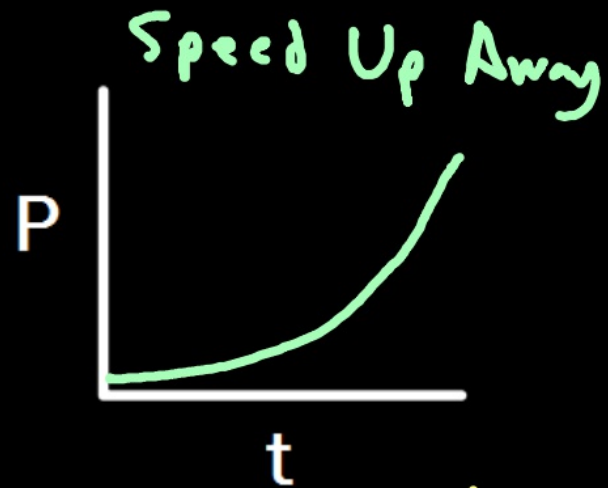

Which car is moving faster, A or B?

B: Steeper Slope

Lines: Same Place
Cross: Brophy passes
Saltz
(NOT SAME VELOCITY!)

1) Type of Motion

1) Still

II) x-t sketch

III) motion map sketch

CV
2) Away

CV
3) Towards

Speed Up
4) Away

Slow Down
5) Away

Speed Up
6) Towards

Slow Down
7) Towards

•

Identify the regions where:

1. Velocity is constant **BDFG**

2. Velocity is changing **ACE**

3. + velocity **ABC**

4. - velocity **EFG**

5. Speeding Up **AE**

6. Slowing Down **C**

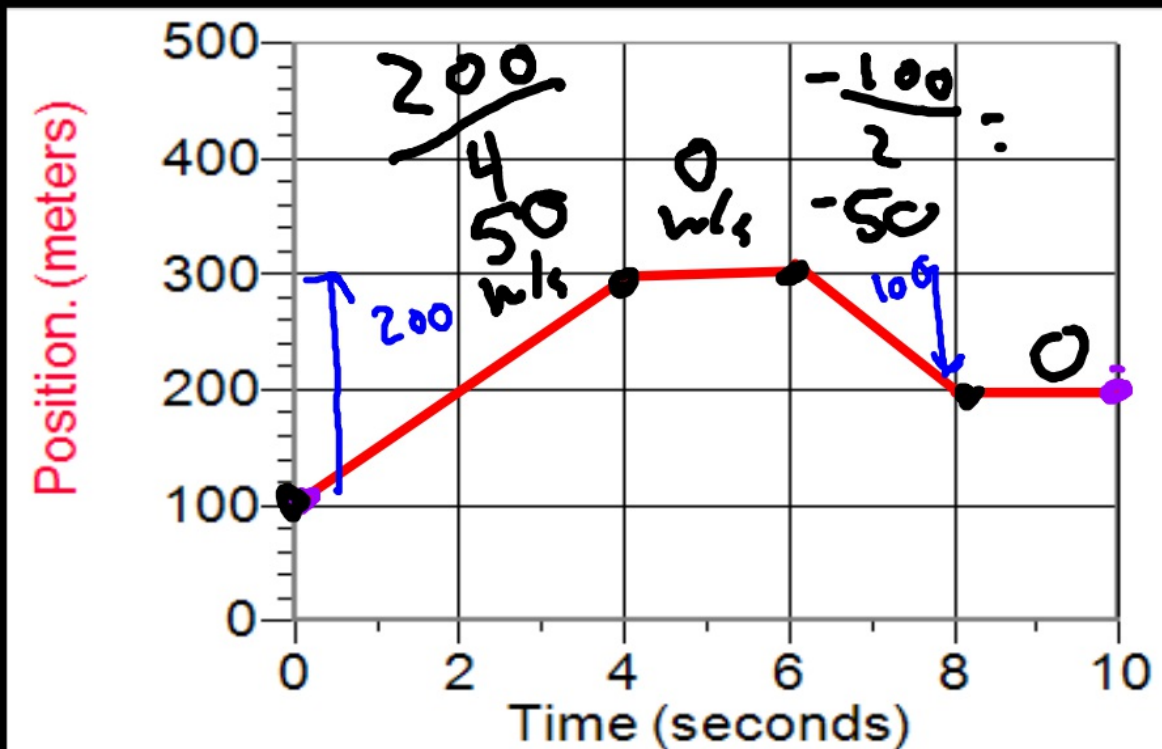

7. Moving Away from Origin

8. Moving Towards Origin

A, C, E = Curves

Finding total distance and displacement on a PT graph

Total Distance

$$\begin{array}{r} 200 \\ + 100 \\ \hline 300 \text{ m} \end{array}$$

Displacement

$$\begin{array}{r} 200 \\ - 100 \\ \hline 100 \text{ m} \end{array}$$

What was its velocity in each stage?

Slope!

+ Displacement

End pt is
above start
point

- Displacement

End pt is
below start
point

0 Displacement

End pt =
Start pt
