

A jar has 20 marbles in it: 4 Blue marbles, 6 Red marbles, 2 White marbles, and 8 Green marbles

You pick one marble from the jar. Calculate the following:

① Probability of picking a Green marble:

$$P(G) = \frac{8 \leftarrow \# \text{ of Green marbles}}{20 \leftarrow \text{total \# of marbles}} = \boxed{\frac{2}{5}} \quad 40\%$$

② Probability of picking a Red marble:

$$P(R) = \frac{6 \leftarrow \# \text{ of Red marbles}}{20 \leftarrow \text{total \# of marbles}} = \boxed{\frac{3}{10}} \quad 30\%$$

The Probability of an Event:

$$P(E) = \frac{\# \text{ of "winners"}}{\text{total \# of outcomes}}$$

③ The Odds of picking a Blue marble:

$$O(B) = \frac{4}{16} = \boxed{1:4}$$

↑
of Blue marbles

↑
of marbles that are NOT Blue

← for every 1 Blue marble, there are 4 Not-Blue marbles

The Odds of an Event:

$$O(E) = \frac{\# \text{ of "winners"}}{\# \text{ of "losers"}}$$

ex Rolling a six-sided die (number cube).

... 1 ← winners ... 1:5

ex rolling a six-sided die (probability),

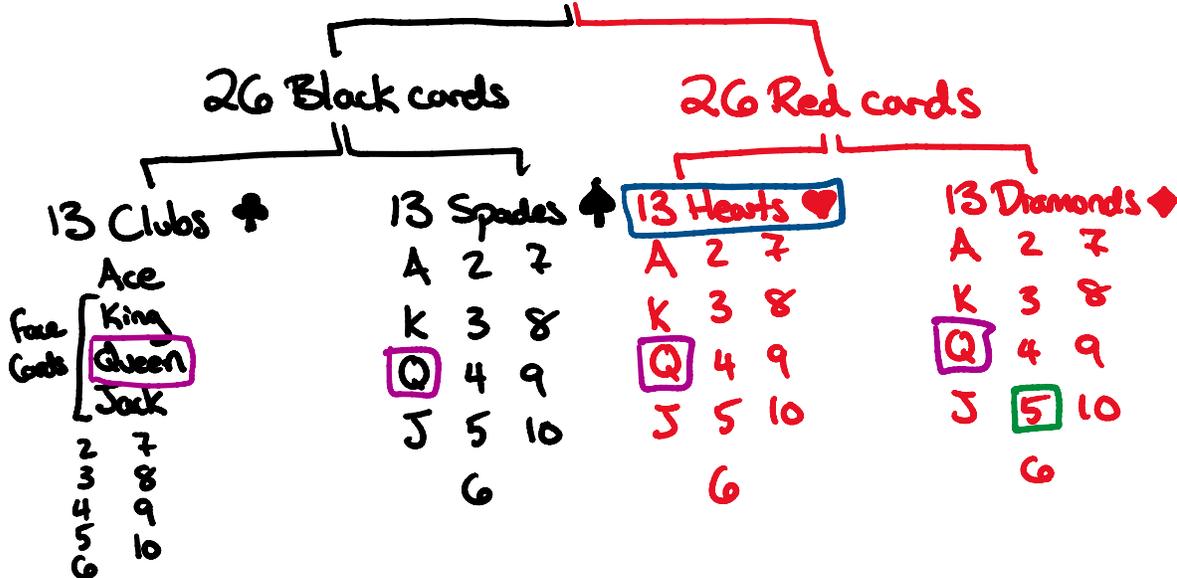

$$P(4) = \frac{1 \leftarrow \text{winners}}{6 \leftarrow \text{total}} \quad O(4) = 1 : 5$$

↑ winners ↑ winners ↑ losers
 ↑ total

What is the probability of rolling a 4?

What are the odds of rolling a 4?

ex Deck of cards: 52 total cards

$$P(Q) = \frac{4}{52} = \frac{1}{13} \quad 7.7\%$$

$$P(H) = \frac{13}{52} = \frac{1}{4} \quad 25\%$$

$$P(5♦) = \frac{1}{52} \quad 2\% \quad O(5♦) = 1 : 51$$
