- 20) You and a friend wave to each other from the top of two buildings. You are looking up at your friend at an angle of 18° angle of elevation. You are standing on a 763 foot building. The height of the building that your friend is on is 795 feet. What is the approximate distance between the two buildings?

$$\tan 18 = \frac{32}{x}$$

$$x = \frac{32}{\tan 18}$$

$$x = 98.49 \text{ feet}$$

$$\tan 42 = \frac{x}{81}$$

$$x = 81 \cdot \tan 42$$

$$x = 72.93 \text{ feet}$$

- 22) A kite is 38 feet above the ground. The child is holding the end of the kite string 4 feet above the ground. The kite string makes a rising angle (angle of elevation) of 42° from the line of sight. Assuming that the string is pulled tight, how much string is out?

$$\sin 42 = \frac{34}{x}$$
