

Bellwork 4/26

An object moves in a circular path of radius r at a tangential speed v . Would it take more or less force for the object to move in a smaller circle at the same speed? How is T affected?

① what is minimum speed needed to drive on wall

$$r = 7\text{m}$$

$$\mu_s = 0.5$$

$$\Sigma F_c = ma_c$$

$$F_n = ma_c$$

$$F_n = m\left(\frac{v^2}{r}\right)$$

$$\frac{\mu_s mg}{\mu_s} = \mu_s \frac{v^2}{r}$$

$$v = \sqrt{\frac{(9.8 \frac{\text{m}}{\text{s}^2})(7\text{m})}{0.5}}$$

$$v = 11.7 \frac{\text{m}}{\text{s}}$$

$$\Sigma F_y = mg \nearrow 0$$

$$F_s - F_g = 0$$

$$F_s = F_g$$

$$\mu_s F_n = mg$$

$$F_n = \frac{mg}{\mu_s}$$

How fast does car
have to go to
lose contact
with hill at
the top?

FBD

$$F_N = 0$$

$$\Sigma F_c = ma_c$$

$$F_g = m \frac{v^2}{r}$$

$$v = \sqrt{9.8 \frac{\text{m}}{\text{s}^2} \cdot 240\text{m}}$$

$$mg = m \frac{v^2}{r} \Rightarrow \boxed{v = 49 \frac{\text{m}}{\text{s}}}$$
