## CHEMICAL QUANTITIES

Chapter 10

## What is a mole?

$\square$ A unit of measurement in chemistry
$\square 1$ mole of a substance $=6.02 \times 10^{23}$ (Avagadro's number) representative particles of a substance
$\square$ Representative particle - atoms, molecules (nonmetals), formula units (metal-nonmetal), ions.

## Particles

$\square$ How many atoms are there in 0.360 moles of silver?
$\square$ How many moles of magnesium is $1.25 \times 10^{23}$ atoms of magnesium?
$\square$ How many molecules are in 2.0 moles of chlorine gas?
$\square$ How many moles are in $3.7 \times 10^{25}$ formula units of KCl ?
$\square$ How many moles are contained in $4.65 \times 10^{24}$ molecules of $\mathrm{NO}_{2}$ ?

## Volume

$\square$ Standard temperature \& pressure (STP)

- Temperature of $0^{\circ} \mathrm{C}$
$\square$ Pressure of 101.3 kPa or 1 atmosphere (atm)
$\square$ At STP, 1 mole or $6.02 \times 10^{23}$ rep. particles of any gas occupies a volume of 22.4 L .

## Volume

$\square$ Determine the volume, in liters, of 0.60 mol SO 2 gas at STP.
$\square 75 \mathrm{~L}$ of $\mathrm{N}_{2}$ gas is how many moles?
$\square$ Determine the number of moles in 33.6 L of helium gas.
$\square$ What is the volume of $3.20 \times 10^{-3} \mathrm{~mol} \mathrm{CO}_{2}$ gas at STP?
$\square$ What volume, in liters, is 2.5 moles of $\mathrm{CO}_{2}$ at STP?

## Formula Mass (Molar Mass)

$\square$ The atomic mass (amu) of an element expressed in grams is the mass of a mole of the element.
$\square$ The molar mass of any element contains 1 mol or $6.02 \times 10^{23}$ atoms of that element.

1 mol of sulfur atoms
$32.1 \mathrm{~g}=1$ molar mass $S$

```
1 mol of mercury atoms
200.6 g = 1 molar mass Hg
```

1 mol of carbon atoms
$12.0 \mathrm{~g} \mathrm{C}=1$ molar mass C

1 mol of iron atoms

$$
55.8 \mathrm{~g} \mathrm{Fe}=1 \text { molar mass } \mathrm{Fe}
$$

## Formula Mass (Molar Mass)

$\square$ What is the molar mass of iron?
$\square$ Determine the molar mass of the following compounds:
$\square$ Water
$\square$ Carbon dioxide
$\square$ Sodium bicarbonate
$\square$ Calcium fluoride
$\square$ Phosphorus trichloride
$\square$ Calcium sulfate

## Grams

$\square$ Must know molar mass!
$\square$ How many grams are in 7.20 mol of $\mathrm{N}_{2} \mathrm{O}_{3}$ ?
$\square$ How many moles is $\mathbf{2 8}$ grams of ammonium phosphate?
$\square$ What is the mass of 9.45 mol of aluminum oxide?
$\square$ How many moles of iron(III) oxide are contained in 92.2 g of pure iron(III) oxide?
$\square$ How many grams is 0.29 mol of $\mathrm{K}_{2} \mathrm{~S}$ ?

## The Mole Road Map

## Practice

$\square$ Calculate the molar mass of:
$\square$ Sodium sulfate
$\square$ Zinc nitrate
$\square$ Convert the following:
$\square 125 \mathrm{~g} \mathrm{H}_{2} \mathrm{SO}_{4}$ to moles

- $1.5 \times 10^{20}$ molecules of $F_{2}$ to moles
$\square$ A sample of $\mathrm{NH}_{3}$ gas occupies 75.0 liters at standard conditions. How many molecules is this?
$\square 0.987$ moles of dinitrogen trioxide to grams.
$\square 10.5 \mathrm{~L}$ of oxygen gas to grams.

## Percent Composition

$\square$ The relative amounts (\%) of each element in a compound.
$\%$ Mass of Element $\mathrm{E}=\frac{\text { mass of element } \mathrm{E}(\mathrm{g})}{\text { molar mass of compound }(\mathrm{g})} \times 100$

## Percent Composition

$\square$ Calculate the mass \% of each element in the following compounds:
$\square \mathrm{C}_{3} \mathrm{H}_{8}$
$\square \mathrm{HCN}$
$\square$ Barium phosphate

## Percent Composition

$\square$ When a $13.60-\mathrm{g}$ sample of a compound containing only magnesium and oxygen is decomposed, 5.40 g of oxygen is obtained. What is the percent composition of each element in this compound? Think about the formula for magnesium oxide...
$\square$ Calculate the percent nitrogen in these common fertilizers.
$\square \mathrm{NH}_{3}$
$\square \mathrm{NH}_{4} \mathrm{NO}_{3}$

## Empirical Formulas

$\square$ Give the lowest whole number ratio of the atoms (or moles of atoms) of the elements in a compound.

## What is the empirical formula of a compound that

## is $\mathbf{2 5 . 9} \% \mathrm{~N}$ and 74.1 \% O ?

Steps to find:

1) Convert mass \% to grams. (pretend you have 100 grams)
2) Divide by molar mass to get moles.
3) Divide answers from step 2 by smallest \# of moles.
4) Multiply to get smallest
whole \#s. (if unnecessary, iump to step 5)
5) Write the empirical formula by putting answers to 3 or 4 as subscripts.

## Empirical Formula Memory Device

$\square$ \% to Mass
$\square$ Mass to Mole
$\square$ Divide by small
$\square$ Multiply till whole

## Empirical Formula Practice

$\square$ Determine the empirical formula for the following:

- $94.1 \%$ O, $5.9 \%$ H
- 79.9\% C, 20.1 \% H
$\square 67.6 \% \mathrm{Hg}, 10.8 \% \mathrm{~S}, 21.6 \% \mathrm{O}$
$\square 27.5 \%$ C, $1.15 \%$ H, $16.09 \%$ N, $55.17 \%$ O
- 17.1\% Na, 39.7\% Cr, 42.7\% O

## Molecular Formulas

$\square$ Either the same as the empirical formula, or a simple whole-number multiple of the empirical formula.

Comparison of Empirical and Molecular Formulas

| Formula (name) | Classification of formula | Molar mass |
| :--- | :--- | :--- |
| CH | Empirical | 13 |
| $\mathrm{C}_{2} \mathrm{H}_{2}$ (ethyne) | Molecular | $26(2 \times 13)$ |
| $\mathrm{C}_{6} \mathrm{H}_{6}$ (benzene) | Molecular | $78(6 \times 13)$ |
| $\mathrm{CH}_{2} \mathrm{O}$ (methanal) | Empirical and Molecular | 30 |
| $\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{O}_{2}$ (ethanoic acid) | Molecular | $60(2 \times 30)$ |
| $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ (glucose) | Molecular | $180(6 \times 30)$ |

Calculate the molecular formula of a compound whose molar mass is $\mathbf{6 0 . 0} \mathbf{~ g} / \mathbf{m o l}$ and empirical formula is $\mathrm{CH}_{4} \mathrm{~N}$.
$\square$ Steps to find:

1) Calculate/determine the empirical formula.
2) Determine the molar mass of the empirical formula.
3) Divide the molecular molar mass (usually given in the problem) given by the empirical molar mass.
4) Multiply the empirical
formula subscripts by the value determined in step 3.

## Molecular Formula Practice

$\square$ Answer the following:
$\square$ What is the empirical formula of an unknown compound that has the percent composition as follows:

- 47.0 \% potassium
- 14.5 \% carbon
- 38.5 \% oxygen
$\square$ If the true molar mass of the above compound is 166.22 $\mathrm{g} / \mathrm{mol}$, what is its molecular formula?
$\square$ A compound with an empirical formula of $\mathrm{C}_{2} \mathrm{OH}_{4}$ has a molar mass of 88 grams per mole. What is the molecular formula of this compound?

## Chapter 10 Practice

$\square$ Convert the following:
$\square 2.0 \times 10^{23}$ molecules of oxygen gas to liters of gas at STP.
$\square 1.45$ grams of calcium nitrate to formula units.
$\square$ Calculate the percent nitrogen in $\mathrm{NH}_{4} \mathrm{NO}_{3}$, a common fertilizer.
$\square$ Determine the empirical formula for the following:
$\square 67.6 \% \mathrm{Hg}, 10.8 \% \mathrm{~S}, 21.6 \%$ O
$\square$ The empirical formula of adipic acid is $\mathrm{H}_{5} \mathrm{C}_{3} \mathrm{O}_{2}$. What is the molecular formula if the molecular mass is $146 \mathrm{~g} / \mathrm{mol}$ ?
