

★ Remember  $\rightarrow$  S, I, g don't split!!

★ Cross out spectator ions

Write the TOTAL Net Ionic Equation for each of the following reactions:

Don't forget to balance and simplify them in the end!!!

Use your solubility charts to identify which compound(s) are aqueous or not; and then balance and simplify the TOTAL Net Ionic Equation!

How it's left!

Predict the products for each of the following reactions, write-balance-simplify the Total Net Ionic Equation for each reaction. ALSO, identify the spectator ions in each reaction.
