

Goal: Create a new Homepage from scratch in a Canvas Course

- 1.) Open the Course you want to create a homepage for.
- 2.) In the course navigation, click on “Pages” and Create a New Page.

- 3.) Name the page. The name of this page will be what students see when they are on the Homepage. You do not need to put anything in this space right now.

- 4.) Be sure to “Save and Publish” this page.

Save & Publish

Save

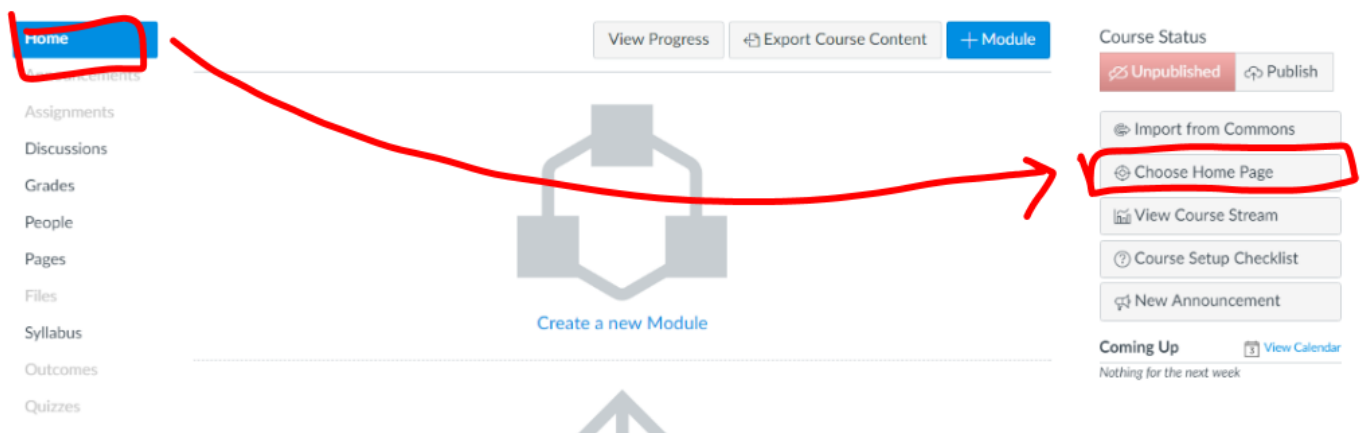

5.) Click "View All Pages".

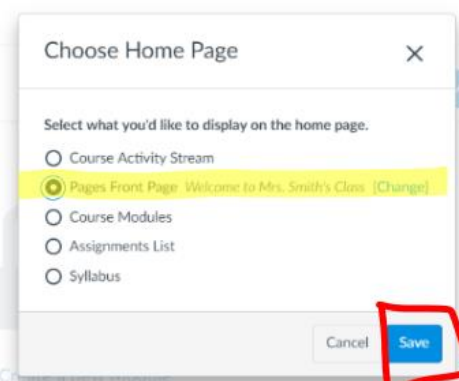

6.) Ensure the homepage you wish to use is Published (The cloud will be green when published and gray when unpublished.) Then select the options wheel to make the page available for Front Page use. You will know the page is ready to use when it has "Front Page" next to the Page title.

7.) Next, select "Home" in your Course navigation. You will need to click "Choose Home Page" on the right-side of the screen.

8.) Select "Pages" and choose "Save". This should make that page your Home Page.

9.) Now you are ready to "Edit" the page.

Test Course 3

This is just a placeholder.

10.) Please be sure to include: **Teacher Name, Course Name, Contact Information, and any other imperative information for students.** This is the page that students will first see when they enter your course.

- a. To insert pictures or hyperlinks, we recommend using a table. This will ensure correct spacing for whatever content, visuals, or hyperlinks you choose to use.

Welcome to Mrs. Smith's Class
